Application notes

Application Note : June 2021

Market involved : -

Product : DPD02, DPD Manager Apps

Customer : OEMs

Subject : Configuration for multiple devices

CUSTOMER ISSUE :

The user needs to configure devices in series with the same configuration.

Programming multiple devices via DIP switches and dials can take a long time and the user may set wrong values.

OUR SOLUTION :

Via the DPD Manager it is possible to create a configuration by setting the required setpoints and delays in detail.

The configuration can then be quickly applied to multiple DPDs via NFC, without having to supply them.

BENEFITS :

- Configuration via NFC ensures great accuracy in setting the setpoints and delays, without the risk of error
- Efficiency is guaranteed by the repeatability of the configuration, with a significant reduction in setup times
